CryptionPro

DevicePro

ApplicationPro

SecureFolder
Enterprise

Benefits of DevicePro

- Regulatory and internal compliance requirements
- Use of mobile storage media without uncontrolled data leakage risks
- Flexible permission settings based on users or groups
- Complete audit log

Benefits of CryptionPro

- Protects corporate data in case of loss or theft
- Allows the safe use of mobile storage devices through encryption
- Protects sensitive data from malicious employees
- Assists in the implementation of legal and internal privacy policies

Benefits of ApplicationPro

- Ensures safe and authorized applications in the corporate IT environment based on black and white lists
- Complements organizations' anti-virus solutions

SECUDE

Technical Information

Supported Operating Systems (each 32-bit and 64 bit)

Windows XP
Windows Vista
Windows 7

Encoding

AES256
TripleDES

Centralized Management

Installation and initialization
De-installation
Full configuration
AD, NDS, open LDAP integration
Flexible lending right
Devices white list (certification)
Content filter header
White & application blacklisting
Reporting & audit
Helpdesk
Centralized security policies
Challenge / response
Activation codes
Flexible group management
Version control

More Properties

Support for load balancing
and reliability
Safe kernel drivers technology
Real-time bidirectional
Communication push &pull
File-based on-the-fly encryption
Mobile decoding and encoding
Offline support (intelligent cache
and TAN)
Minimal network load

Selected Features of DevicePro

- Complete online/offline support for users inside or outside the LAN
- Manages individual access rights directly with the respective users, groups or computers
- Ensures controlled data transfer, independent of file type, according to corporate policy

Selected Features of CryptionPro

- Configurable automatic or manual encryption
- Location-independent support in the company network or on the road
- Support for a variety of encryption algorithms such as AES 256 Bit and Blowfish 256 Bit
- Secure central password management with master password

Selected Features of ApplicationPro

- Intelligent Intelligent learning mode that records all programs of a user or group within a specified period of time enabling easy creation of user group specific white lists
- Simple wizard-assisted creation of packages
- Flexible assignment of software packages to roles such as marketing or administration

DevicePro enables administrators to control data transfer to and from mobile storage media by controlling the interface to portable media devices, thus protecting mobile devices from malware without compromising the loss of data. The solution also allows administrators to determine and authorize ports and mobile storage media and control all file types from being opened or copied. The solution provides real-time management, flexible access settings, and other features for mobile users ensuring a high degree of acceptability.

CryptionPro encrypts data that is copied to external storage media. This happens automatically and reliably in the background without disrupting the user's work. At another location within your company, the data can be decrypted and read. Encryption is restricted to only those groups or departments that have been authorized. Encryption takes place at the file level. This allows users to exclude specific files from being encrypted – if the appropriate permissions have been granted. In addition, CryptionPro supports mobile encryption, thus allowing you to protect sensitive data that you may have been entrusted with.

ApplicationPro

The uncontrolled use of applications is a growing problem for businesses worldwide.

ApplicationPro tackles this problem from two perspectives:

- (a) It defines the applications that are allowed to run on the corporate network (Whitelist)
- (b) it defines a list of prohibited applications (Blacklist)

The unconscious execution of malware and spyware causes enormous economic damage across organizations today. The installation of unlicensed software by an unwary user can cause unpleasant consequences for the organization during software audits.
